

Delivering a fast clean
and eco-friendly small
works solution for your
next building project

Traditional Building Methods

We have all seen the traditional building site where there is a large number of different tradesmen from an array of different companies, with a project manager working hard to keep the build moving forward. Building materials are often scattered amongst the unwanted ground waste from when the foundations were dug, way back in phase one of the build.

This slow and messy way of construction can now truly be a thing of the past and any size project can now be completed within a fraction of the time and without mess by a small number of on-site experts from just one company.

Our New Approach

Our mess-free approach is faster, cleaner and eco-friendly. While our experts are preparing your ground, off-site in our own premises, we will be constructing your panels ready for installation.

- Fast Screw Foundation System where possible
- Removal of all unwanted ground waste
- Off-site panel construction at our own premises
- Fast install of pre-constructed eco-friendly sections
- Materials and experts only on site when needed
- The fastest and cleanest approach to small works

Who We Are

We are a company with over 40 years of specialist experience in the design, manufacturing, delivery and installation of no mess building systems that can be installed in a fraction of the time it takes to use more traditional forms of building methods.

Building Today for the Future

Our new eco friendly and sustainable approach to small works includes most domestic projects such as single story extensions, garden rooms, orangeries, external buildings, loft conversions and most new structures for home improvements.

Fast Deployment

Traditional build time of standard small works such as a single story extension could take well over 6 months. The Eco Home Tec solution can be completed within 3 months, without the mess or on-site disruption.

We have developed the following key solutions to deliver a fast clean and eco-friendly approach to small works building projects

- Pre-Construction
- Fast Screw Foundation System
- Off Site Construction
